

## CABLEGRID\* FACT SHEET

CableGrid creates a visual ceiling plane that can bring human scale to open ceiling spaces while diverting attention from the clutter of plenum utilities. It is equally effective dropped below an existing acoustical ceiling to highlight special areas.

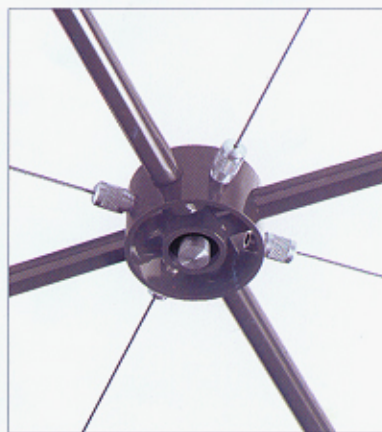

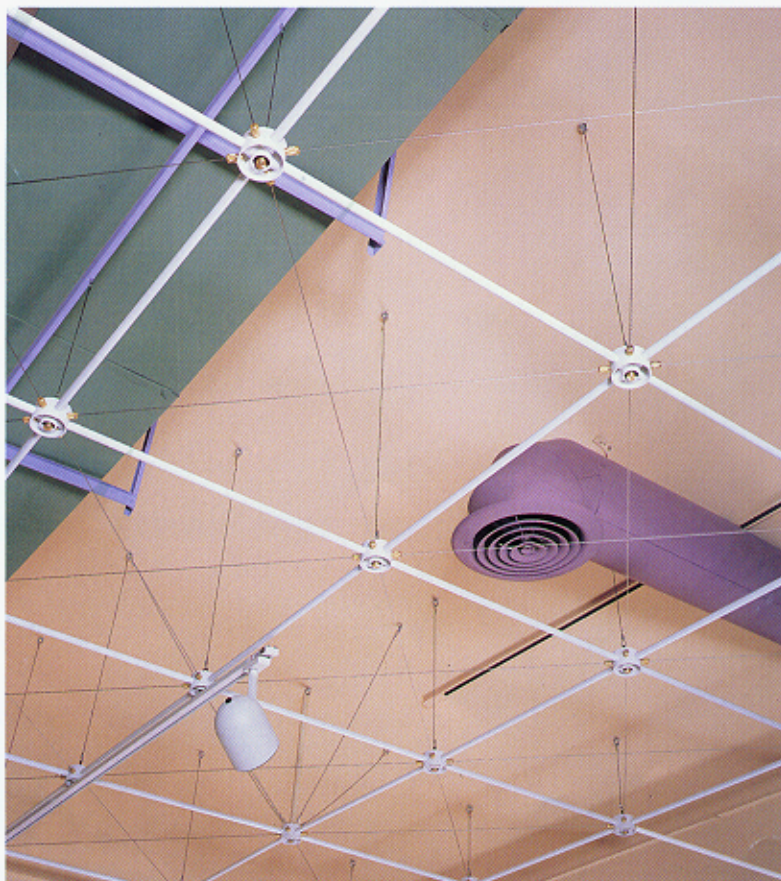

CableGrid provides full access to all plenum utilities, while leaving lighting, air distribution, P/A speakers and fire sprinklers free to function unimpaired. It is virtually maintenance-free. Hub design permits the system to act as a platform to support light tracks, banners, signage and even merchandise displays by transferring loads directly through the hangers to the structure above. CableGrid can be easily removed simply by unscrewing the tensioners, and compactly stored for reuse.

The system is stocked in five standard modules (24", 30", 36", 48", and 60"). White and Charcoal are the standard colors. A wide variety of custom colors and finishes is also available, subject to inquiry.

With elegant simplicity and a surprisingly low cost, CableGrid offers architects and interior designers a new opportunity to improve the proportions of a full volume space without surrendering to the boredom of a plain white acoustical ceiling.

### SUGGESTED APPLICATIONS

*Department Stores  
Specialty Stores  
Supermarkets  
Conversions  
Airports  
Convention Centers  
Lobbies  
Restaurants  
Conference Rooms  
Engineering Areas
