

## TRUSSEL\* FACT SHEET

Lending a look of exposed structure, Trussels establish a visual ceiling plane while allowing ceiling utilities to function virtually unimpaired.

Trussels may be clipped to any T-bar grid member having a standard 15/16" wide flange. They are scaled for optimum effect when mounted 4' on center. Standard 8' sections are capable of supporting light tracks, banners, or signage, and may be cut at any point to fit between walls. Standard sleeves provide nicely detailed slip joint at wall terminations.

The standard Trussel finish is white, also available in custom color upon inquiry.
